A new study by the think tank the Atlantic Council claims that U.S. President Donald Trump’s “rhetoric is reshaping the landscape of the Atlantic alliance” and will lead to a new arms race and a trade war with Europe. To this end, it says that Europe and the U.S. will have to develop new strategies for dealing with the fact that their economies are “incompatible with each

X-ref A special purpose system architecture and programming environment called X-ref was introduced in AutoCAD R14. X-ref is built on an extensible object-based framework with support for services-oriented architecture, connecting to multiple CAD file formats, and is based on the same principles as the 3D modeling software Rhino. Data structures Autodesk has a variety of objects including the classes Catalog, Drawing, Style, and Unit. Each object can have any number of children (objects), and each one can have any number of properties (attributes). Each property has a name and a data type (see Property types and Data types). Each type is a class, and each class is a hierarchy of object sub-classes. Objects can be set as property values for other objects; for example, the type and style of a drawing can be set for the drawing. Properties are read from other objects, or by their own "get" method, and they can be set in the same manner. Nodes in a drawing are placed at various locations. These locations are places at which the drawing may be subdivided into parts or at which the drawing can be hierarchically subdivided into other drawing parts. The nodes and the drawing items on the nodes form the nodes tree in the drawing. The nodes tree is traversed in the same manner as the hierarchy, which can be used for the drawing, type, or style navigation. Arrays are used in many cases for the manipulation of the nodes. Array indexes point to the tree node that has the given property. A "get" method is used to read a property from the indicated node. A "set" method can be used to set a property to a given node. Extensibility For extensibility, AutoCAD has a text processing and design automation system based on a grammar-based method called the visual language. The visual language enables the author to code visual instructions in "commands" and "blocks". Commands specify a visual effect to be performed, whereas blocks create context-dependent "if...then" statements. The result is that a user can use standard programming conventions (such as curly braces to enclose blocks) and then "imagine" his or her visual language code as if it were standard text. Visual Language concepts and practices can be used for other applications besides AutoCAD. References External links AutoCAD User Guide (PDF) - 2010 Category ca3bfb1094

What's New in the?

New Bezier curves: Bézier curves now have extra-precise control of control points to ensure you get better results when creating and editing Bézier curves. Bezier curves are now easier to work with. To create a Bézier curve, click once and drag. To edit the curve, hold down the Shift key while moving or rotating the curve. (video: 1:00 min.) New Inline family styles: Styles can be a tremendous asset to CAD designers. With Inline styles, you can create and apply a single style to multiple items at once, saving time, and allowing you to create designs quickly. With Inline styles, you can apply a style to individual components or groups of items, so you can create and reuse one style for different groups of objects. (video: 1:30 min.) The Ribbon has been redesigned: We've taken the most popular Ribbon items and made them easy to access. We've also brought the Ribbon to life with video tutorials and information. (video: 1:45 min.) New color correction and video support: Color correction support provides easy-to-use tools for improving the appearance of your designs. Whether you're working with AutoCAD or 3ds Max, you can correct problems such as uneven colors, illumination, shadows, highlights, and more. Video tutorials are available for all AutoCAD and 3ds Max commands. (video: 30-60 min.) Smarter drawing: With editing improvements, drawing tools can now change more easily. We've improved the precision of shape tools and improved the performance of cut and paste. Now, we've made it easier to copy and paste by providing smarter moving and editing tools for shapes. Draw directly from your camera: Make your designs even better by drawing directly from your camera. You can use any device, including your iPad, Android device, laptop, or desktop to draw directly into your design. (video: 45 min.) Objects and attributes now display in context: Moving, sizing, and deleting objects is now simpler. This means that objects and attributes will display in context, so you can see more information about what's happening. Multi-touch gestures: Multi-touch gestures provide better flexibility and customization of
